## **Anti-bacterial products**

Staph infection often begins as a skin lesion that refuses to heal normally. “We have a new solution,” said a spokesman for Phillips Company. “A simple topical application, much like a soap, will kill MRSA bacteria on contact.” StaphWash, the first anti-MRSA product to be manufactured by the company was developed as a new product by Phillips Company in 2007.

MRSA is present in the general population. It can be found in common places and situations. While it is treatable, MRSA is a bona fide superbug that shows no inclination toward disappearing.

The first-line antibiotics—the ones originally used to treat staph and many other bacterial infections—have largely been rendered useless. Bacteria, like all living things, adapt to threats in their environment. Over the decades, they have, to varying degrees, become resistant to treatment. StaphWash Antibiotic is the answer to this problem!

Phillips Company is the world’s first non-profit manufacturing company whose aim is to “identify low-cost health solutions that are not being developed, match these solutions with very important skin diseases and take these solutions to the people who need them.” Many simple low-cost and effective health-care solutions are not available because pharmaceutical companies have no incentive to put them through clinical trials necessary to get regulatory approval. Sometimes this is because the low-cost solution can not be patented or because it costs millions of dollars for clinical trials needed to get regulatory approval.

“We have a mandate to do this and take it to the people,” said a company spokesman. “We will develop and manufacture low-cost and effective health care solutions. The products in this catalog are FDA-approved.

# StaphWash Plus drops

Size: 3 mL Product #30137 MSRP = \$39.95

<b>Drug Facts</b>

# StaphWash Antibiotic, ACNE and Rosacea

Size: 3 mL Product #30129 MSRP = \$24.95

Antibiotics may reduce overall inflammation of the skin. Antibiotics also reduce the number of pimples and the amount of redness around pimples.

Antibiotics are used to reduce the symptoms of rosacea, including redness, pimples, and red lines on the face (telangiectasia), and thick bumps on the nose (rhinophyma), and to reduce the symptoms that accompany eye involvement in rosacea.

## Culture test results; StaphWash Antibiotic

**Culture test 28A** shows the zone of inhibition resulting from 1 vertical drop of StaphWash Antibiotic. The drop covered a circle approximately 10 cm in diameter (the yellow region in the center; shown more clearly in the magnified photo below). There was no running or dispersion. Amazingly, the zones of inhibition extend to a diameter of approximately 40 cm for each bacteria tested. Test results above are for E. Coli, Pseudomonis, Acinetobacter, and MRSA. These and other tests were carried out by an independent testing laboratory.

MRSA zone of inhibition is the larger dark-grey area surrounding the yellow vertical-drop-zone in the center

## Anti-allergen products

**How it works:** IvyMed works by destroying the urushiol oil that causes the poison ivy allergy. Poison Ivy and Poison Sumac locations are shown in bright red in the east and central USA. Poison Oak locations are shown in darker red in the western USA.

Poison Ivy and Poison Sumac locations are shown in bright red in the east and central USA. Poison Oak locations are shown in orange in the western USA.

Did you know poison Ivy is the most common allergy in the world? It affects nearly half of the American population each year. In fact, every year as many as 50 million people have a reaction from poison ivy, poison oak, or sumac.

When your skin comes into contact with one of these plants, the urushiol begins to penetrate the skin very rapidly and a rash could develop within 12 to 48 hours. Some symptoms may include redness and swelling of the skin, severe itching, and blistering.

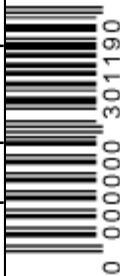

IvyMed is a registered trademark of Phillips Company.

## **Anti-Venom and Skin Protectant Products**

### **StingMed for Insects**

This product stops itching and stinging; and reduces swelling caused by insect bites. It cleanses the skin and neutralizes insect venom that causes itching and rash.

### **StingMed for Fire Ants**

This product is for use immediately after a fire ant sting, to prevent the blister from forming. Blisters can itch for more than a week, and can leave a scar. This product is especially useful for children and adults with sensitive skin.

### **AntiVenom-X**

AntiVenom-X is a first aid antibiotic and skin cleanser for use following posion snake bites. Of the 300,000 species of snakes, around 3,000 are venomous. In the U.S., people die of snakebite every year. (<http://ask.yahoo.com/ask/20000803.html>)

During the product development phase, a full-scale national field test was conducted during the summer of 2006. Results of this field test were dazzling, in that 100% of all the feedback from human snakebite victims was overwhelmingly positive.

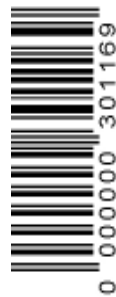

Our field test and investigations turned out to show strong benefits to snakebite victims. Accordingly, this product could revolutionize the “anti-venom” approaches currently being used.

The field test results are available online at [www.PhillipsCompany.4t.com/VXft.pdf](http://www.PhillipsCompany.4t.com/VXft.pdf)

# AntiVenom-X Wash Kit for Snakebite

Size: Kit Product #30118 MSRP = \$39.95

<b>Drug Facts</b>	
<b>Active Ingredients</b>	<b>Purpose</b>
Zinc acetate (.2 % by volume; Bottle A) .....	Skin cleanser/protectant
Tetracycline (3% by volume; Bottle B) .....	First-aid antibiotic
<b>Uses</b>	
<ul style="list-style-type: none"> <li>■ First aid to help prevent skin infection.</li> <li>■ Cleanses skin and helps reduce the risk of bacterial contamination.</li> </ul>	
<b>Warnings</b>	
<ul style="list-style-type: none"> <li>■ For external use only; do not swallow.</li> <li>■ Keep away from children.</li> <li>■ Do not use in the eyes or apply over large areas of the body.</li> <li>■ <b>In case of deep or puncture wounds, animal bites or serious burns, consult a physician.</b></li> <li>■ May be harmful if swallowed.</li> <li>■ Stop use and consult a physician if the condition persists or gets worse.</li> <li>■ Do not use longer than 1 week unless directed by a physician.</li> <li>■ Do not use if allergic to any ingredient listed on this label.</li> </ul>	
<b>Directions</b>	
Shake well to mix. Use liquid from <b>Bottle A</b> to clean and irrigate the affected area immediately after the bite. Massage affected area for 15 minutes. AntiVenom-X cleanser from Bottle A must reach the venom for best results. Apply a small amount of liquid from <b>Bottle B</b> (an amount equal to the surface area of the tip of a finger) on the area 1 to 3 times daily and <b>rub gently</b> using a Q-tip.	
<b>Other information</b>	
AntiVenom-X is an OTC anti-bacteria antibiotic drug product for human use, manufactured in accordance with FDA 21 CFR part 347 and FDA 21 CFR part 333 subpart A. Store at 40 to 120 degrees F. <b>Net contents:</b> 3 mL (dropper bottle). This product contains no alcohol; no animal products; no biological products.	
<b>Inactive ingredients</b>	
Water, sorbic acid, sodium dodecyl benzene sulfonate, ascorbic acid, magnesium stearate, silica and stearic acid.	
<b>Questions and Side effects</b>

## About our company

### Phillips Company

In 2007, Phillips Company became the world's first not-for-profit company to manufacture new anti-MRSA products (**StaphWash**) that kill MRSA bacteria without the use of antibiotics. In 2008, we began manufacturing an FDA-registered product called **StaphWash Plus** and another FDA-registered drug product called **StaphWash Antibiotic**; a topical application that is effective for a broader range of bacteria. Because of our special formulation, this product, which contains tetracycline, is much more effective against MRSA than most other products that contain tetracycline.

This is the story of how we developed something useful for the millions of people who are allergic to poison ivy and other poisonous plants. These products are called anti-allergen skin cleansers. That success was followed by the development of anti-venom skin cleansers, including the world's first and only product formulated to neutralize venom from a snake bite. Next, we developed anti-bacterial skin-cleanser products that kill the bacteria that cause Staph infection. My name is Howard Phillips (To see a resume of education and experience, click on <http://phillips.8k.com> ) Here is my story...

***The beginning:*** IvyStop! and IvyMed began with a great idea. We developed this idea slowly, at first, while I held full-time jobs as a professor in the College of Engineering at the University of North Carolina at Charlotte, and later as part of a medical research team at the University of Southern California in Los Angeles.

***The problem:*** During summer recess, I spent time “on the reservation” in southeastern Oklahoma where there is a LOT of poison ivy, poison oak and sumac. I enjoyed being there, because that's where I grew up, and I am a member of the Choctaw Nation of Oklahoma. Even though we Choctaws tend to like being outdoors, I am allergic to poison ivy/poison oak.

***The need for a better remedy:*** The care of a physician typically includes the use of ointments and lotions, and sometimes steroid injections — but the poison ivy allergy often persists for one to two weeks. During this period, the itching continues, and the spreading to other skin areas is usually a problem. Not satisfied with this, we put into motion the traditional Native American process for developing a

remedy for poison ivy.

***Nature often offers solutions for allergies.*** One example is a plant called Jewelweed which grows naturally in some regions of the U.S. Jewelweed is often effective for treating a wide variety of natural irritants.

***Our search for a better remedy:*** We considered both natural and commercial-product combinations in the quest for an instant relief from the itching caused by a poison ivy or poison oak attack. After two years of evaluation, we developed IvyStop, followed by IvyMed.

***A successful result:*** Our conclusion is that IvyMed works better than any other known remedy to instantly stop the itching and quickly dry up the “weeping” that often results from a poison ivy attack. We are finding that this conclusion is shared by people who have used it.

***Developed by engineers and Native Americans:*** Our products are a mix of engineering and home remedy, developed using Native American tradition. We are not representatives of pharmacists or physicians.

***Phillips Company (formerly Phillips & Co.) is a manufacturing company.*** The NAICS codes for our company are 325998 and/or 325412. The D-U-N-S number for our company is 612368238. We are a 100% minority-owned business. We are located in an SBA-designated HUBZone. We are not a retail sales company.

**Want to try our novel products?** We are a manufacturing company. If you are a retail purchaser, please contact one of our distributors (see our DISTRIBUTORS page).

***The products in this catalog are FDA-approved.***

- This catalog contains only the FDA-registered family of our products, all of which are registered and sold as OTC drugs.
- Other (non drug) products manufactured and sold by Phillips Company are listed in a separate online catalog at [www.PhillipsCompany.4t.com/Catalog.pdf](http://www.PhillipsCompany.4t.com/Catalog.pdf)

**IvyStop!** and **IvyMed** are products offered by Phillips Company to stop the itching caused by poison ivy, poison oak and poison sumac. Use of either of these products will stop the itching within one minute and dry up the weeping lesions within 3 days.

**StingMed, Venom-X for Snakebite, Venom-X Wash Kit, AntiVenom-X Wash Kit, StingMed for Fire Ants, Fire Ant StingBlock, StingMed for insects (a general-purpose anti-venom), Venom-X for Jellyfish stings and Venom-X for Spider Bite** are products offered by Phillips Company to (1) cleanse and neutralize the venom from snake bite, jellyfish stings and spider bites; (2) stop the itching and scratching from insect bites and stings; and (3) specifically to stop the burning and to prevent the formation of blisters after fire ant stings.

**StaphWash Room Shield for hospital room decontamination** is a product being developed to kill bacteria that causes Staph infection in hospitals. This product is equally effective as a killer of MRSA and VRE. These products are for you if you want to prevent Staph infection or kill the bacteria that can cause hard-to-heal skin lesions. Before product introduction, extensive laboratory culture tests and human field trials were conducted. Contact Phillips Company for a report describing the amazing results obtained by patients and test subjects during the field trials. This report is available online at [www.PhillipsCompany.com/FieldTest.pdf](http://www.PhillipsCompany.com/FieldTest.pdf)

**Staph-X and Strivector** are other products in development. These products are formulated to kill a wider range of bacteria including **Staph, MRSA, E.Coli, Acinetobacter and Klebsiella.**

## **Phillips Company USA Locations: Arizona and Oklahoma**

**Business office:** 10010 West Oak Ridge Drive, Sun City, Arizona 85351 Tel. 623-594-9195
